# Movie Analysis Dashboard

# Movie Analysis Dashboard

## INFORMATION ABOUT PROJECT

The **Movie Analysis Dashboard** provides valuable insights into movie ratings, trends, and audience preferences. It reveals that **Crime|Drama** is the most rated genre, followed closely by **Action|Sci-Fi** and **Animation|Adventure**, indicating a strong audience interest in these categories. The **average rating of 3.27** suggests that most movies receive moderate feedback from viewers. Among individual films, **The Matrix (3.4), The Godfather (3.3), and Finding Nemo (3.2)** are among the highest-rated, showing a preference for classic and animated movies.

A **declining rating trend over the years** suggests that recent movies might not be receiving as high ratings as older films, possibly due to changing audience expectations or shifts in the industry. Additionally, the **rating distribution analysis** highlights that a significant number of ratings fall within the **3-4 star range**, with **4-star ratings being the most common**, indicating that viewers generally rate movies positively but not exceptionally high.

Overall, this analysis helps in understanding audience preferences, identifying top-performing movies, and predicting future rating trends, which can be useful for **movie recommendations, industry analysis, and content creation strategies**. 🎬 📊
